

Mobile responsive and Positions

Assignment

Assignment

1. **What are media queries in CSS and their use case?**

Definition: Styles are applied by media queries according to device specifications.

Use Case: Develop designs that are responsive by modifying styles to fit various screen sizes, devices, and environments.

2. **Difference between min-width and max -width in media queries in CSS.**

min-width: Apply styles in the event that the width of the viewport matches or surpasses the given value.

max-width: Styles are applied if the width of the viewport is equal to or less than the given value.

3. **Explain float property and clear property in CSS with examples.**

- Float Property:

Definition: Positions an element to the left or right of its container, allowing other elements to flow around it.

Example:

CSS

```
.float-left {  
  float: left;  
}
```

- Clear Property:

Definition: Specifies which sides of an element are not allowed to have floating elements.

Example:

CSS

```
.clear-both {  
  clear: both;  
}
```
